

your spring skin routine

Spring marks the time to update your skin routine and throw out the old products gathering dust in your bathroom.

dermalogica[®]

your spring skin routine

SPRING SUN

As we venture outdoors and the sun is warming, slather on your SPF. UV causes up to 90% of the skins ageing including dark patches, lines and loss of elasticity. Choose a minimum spf 30 broad-spectrum protection and apply regularly. Your skin will thank you!

HAYFEVER HANGOVER

Pollen plays havoc with skin as histamine hits the roof. It causes blood vessels to dilate and sensitivity to heighten leaving skin red and irritated. Our professionals love Dermalogica's UltraCalming™ range to dramatically reduce inflammation and restore balance.

SPRING IN THE CITY

As thoughts turn to outdoor exercise and lunch in the park, we expose our bodies to higher levels of pollution. This can cause premature ageing and inflammation if left unchecked. Clean and protect with Dermalogica's Daily Superfoliant™ used in the shower. With activated charcoal, skin gets a super detox!
